Background

Receptor for the cytotoxic ligand TNFSF10/TRAIL. The adapter molecule FADD recruits caspase-8 to the activated receptor. The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis.

Western blot detection of DR5 in SW480, K562, HCT116 and HeLa cell lysates using DR5 mouse mAb (1:1000 diluted). Predicted band size: 40/48KDa. Observed band size: 40/48KDa.
