Background

Negatively regulates MAP kinase activation by limiting the formation of Raf/MEK complexes probably by inactivation of the KSR1 scaffold protein. Also acts as a Ras responsive E3 ubiquitin ligase that, on activation of Ras, is modified by auto-polyubiquitination resulting in the release of inhibition of Raf/MEK complex formation.

Western blot detection of BRAP in A549 and HUVEC cell lysates using BRAP mouse mAb (1:500 diluted). Predicted band size: 67KDa. Observed band size: 67KDa.
