Background

NF-kappa-B is a pleiotropic transcription factor present in almost all cell types and is the endpoint of a series of signal transduction events that are initiated by a vast array of stimuli related to many biological processes such as inflammation, immunity, differentiation, cell growth, tumorigenesis and apoptosis.

Western blot detection of NF- κ B1 p105/p50 in K562, C6, 3T3 and HeLa cell lysates using NF- κ B1 p105/p50 mouse mAb(dilution 1:500). Predicted band size: 120, 50kDa. Observed band size: 120, 50kDa.
