Background

DARPP-32 a member of the protein phosphatase inhibitor 1 family. A dopamine- and cyclic AMP-regulated neuronal phosphoprotein. Both dopaminergic and glutamatergic (NMDA) receptor stimulation regulate the extent of DARPP32 phosphorylation, but in opposite

Western blot analysis of DARPP-32 expression in EGF (200ng/ml, 30min) treated 293 whole cell lysates, The lane on the left is treated with the antigen-specific peptide.
